

Technical Data Sheet / Cap Lining Machine

This cap lining machine is specially designed for lining of twist off- and lug caps. It is a modular machine which can be built with up to 6 stations, each station can handle up to 250 caps per minute, depending on product diameter.

This machine is equipped with integrated infeed conveyors, which are transporting the products directly into the lining stations. The number of lining stations depends on the machine type.

The smallest type KGA 2 has two of these stations. Each station is equipped with a special injection gun, designed for PVC- and water based compounds.
